

# Capturing Light: What is Flashing?

## GOAL

Discover the cause of flashing, and obtain repeatable methods for optimum results in sodium vapor glazing

## Approach

Rule out Alumina Silica Ratio  
Rule in metallic oxides, fluxes, and firing as factors

## Hue

Increasing iron and titanium in clay additives changes hue

|        |      |     |     |     |     |     |
|--------|------|-----|-----|-----|-----|-----|
| SSP    | 100% | 90% | 80% | 70% | 60% | 50% |
| Newman | 0%   | 10% | 20% | 30% | 40% | 50% |

Super Standard Porcelain /Newman

|        |      |     |     |     |     |     |
|--------|------|-----|-----|-----|-----|-----|
| SSP    | 100% | 90% | 80% | 70% | 60% | 50% |
| Tile 6 | 0%   | 10% | 20% | 30% | 40% | 50% |

Super Standard Porcelain /Tile 6

## The Silica Alumina Ratio is not a factor

Kaolin clays with similar SiO<sub>2</sub>:Al<sub>2</sub>O<sub>3</sub> ratios

|  | Super Standard Porcelain | Grolleg | Georgia | EPK    | Tile 6 | Helmer |
|--|--------------------------|---------|---------|--------|--------|--------|
|  | SSP                      | GR      | GE      | EPK    | TIL1   | H      |
| SiO <sub>2</sub>                                 | 54.14%                   | 54.46%  | 52.73%  | 54.08% | 54.88% | 54.50% |
| Al <sub>2</sub> O <sub>3</sub>                   | 43.68%                   | 41.98%  | 44.46%  | 43.75% | 42.01% | 41.14% |
| K <sub>2</sub> O                                 | 0.92%                    | 2.16%   | 0.16%   | 0.46%  | 0.00%  | 0.61%  |
| Na <sub>2</sub> O                                | 0.17%                    | 0.11%   | 0.05%   | 0.00%  | 0.05%  | 0.09%  |
| MgO  | 0.25%                    | 0.34%   | 0.16%   | 0.19%  | 0.63%  | 0.30%  |
| CaO  | 0.11%                    | 0.11%   | 0.27%   | 0.29%  | 0.47%  | 0.57%  |
| Fe <sub>2</sub> O <sub>3</sub>                   | 0.45%                    | 0.80%   | 0.51%   | 0.59%  | 0.39%  | 1.50%  |
| TiO <sub>2</sub>                                 | 0.03%                    | 0.03%   | 1.65%   | 0.42%  | 1.57%  | 1.30%  |
| SiO <sub>2</sub> :Al <sub>2</sub> O <sub>3</sub> | 2.11:1                   | 2.21:1  | 2.02:1  | 2.10:1 | 2.22:1 | 2.25:1 |

## Intensity

Flux percentages in clay bodies or flashing slips optimize the intensity of the flashed color response between 20 and 35%.

Tile 6/ Nepheline Syenite

## Color Theory

Intensity

Hue

Value

## Value

Reduction in firing and early cooling can enhance depth of color response.

Oxidized soda-fired porcelain (L)  
Reduced soda-fired porcelain (R)

## Color Forms in Cooling

Draw ring pulled during firing (L) versus slow cooled in the kiln (R)

## Flashing

is a reaction between volatilized sodium (salt/soda) or potassium (wood) in the atmosphere of a reduction fired kiln environment, with iron and titanium oxides in present in clay. The oxides crystalize on the surface in cooling resulting in a colorful response.

Uncovering the root causes of, and methods for, achieving flashing in sodium vapor glazing
